

Gaumard®
Simulators for Health Care Education

Newborn TORY® S2210

Wireless and Tetherless Neonate Simulator

- Lifelike appearance and physiology
- eCPR™ - CPR quality monitoring and training
- Fully responsive even while being carried
- Easy-to-use neonatal care training solution
- Simulate clinical cases in any setting
- Includes Neonatal Care Simulation Learning Experiences™ scenario package

Immediate care after delivery

Newborn TORY® offers true-to-life physical and physiological attributes, wireless mobility, and ease-of-use designed to simulate lifelike clinical cases for every stage in neonatal care. Whether training in a simulation center, in-situ, or in transit, TORY brings neonatal simulation closer to real life than ever before.

Appearance, anatomy, and physiology

Newborn TORY looks and feels like a real term newborn with its soft and supple skin, lifelike vitals, and realistic articulation. The perfect combination of features for APGAR evaluation and physical examination scenarios.

6 lbs. / 2.7kg 20.75 in / 52.7cm

Full range of motion

Active arm movement: limp, active, seizures

Cyanosis, crying, grunting

Fontanelle, brachial, and umbilical pulses

Heart, lung, and bowel sounds

Mother-newborn physiologic link

When paired with VICTORIA®, the “Mother-Newborn Link” wirelessly transfers the fetus’s condition at the moment of birth to TORY.

This exclusive feature lets operators accurately simulate the transition from intrauterine to extrauterine life with just one click while allowing participants to train continuity of care skills essential to improving response time and teamwork.

Comprehensive cardiopulmonary physiology with feedback

TORY’s heart and lung sounds, chest rise, EtCO₂, and oxygen saturation readings allow participants to practice recognizing and managing varying degrees of distress. Additionally, built-in ventilation and chest compression sensors accurately simulate realistic physiological responses to intervention without input from the operator. TORY’s powerful software handles the complex physiology so you can focus on the providers’ actions.

Real CO₂ Exhalation

Tory exhales real and measurable CO₂ and is thus capable of simulating a broad range of cardiopulmonary responses. Now participants can train to interpret and manage abnormal levels of EtCO₂ using a real capnometer to improve response time and reduce risk in live situations. TORY’s CO₂ exhalation system is small and portable, allowing continuous monitoring during transport.

CPR quality sensors

Neck hyperextension sensor

Heart and lung sounds

Hypoxia modeling

Monitor respiration and EtCO₂ using native monitoring devices

Detect CO₂ exhalation using real devices

EtCO₂ training benefits

- Improve recognition and diagnosis of life-threatening conditions related to abnormal EtCO₂ including respiratory distress, apnea, cardiac arrest, and shock
- Improve recognition and management of hypo- and hyperventilation using breath-to-breath ventilation data
- Train to confirm endotracheal intubation with every procedure
- Train to recognize inadvertent extubation or “false negative endotracheal intubation” due to compromised pulmonary blood flow
- Improve management of full arrest by learning to monitor perfusion during compressions in real-time and identifying the return of spontaneous circulation (ROSC)

eCPR™ Real-time CPR quality feedback and smart trainer

The eCPR™ interactive monitor and smart trainer allow educators to evaluate the effectiveness of ventilations and compressions in real-time. It also features verbal coaching cues and a comprehensive performance report for better training and better outcomes.

Microsoft Surface Pro tablet and UNI® Simulator Control Software are included.

Includes TORY Neonatal Care Simulation Learning Experiences™ Scenario Package

The new TORY Neonatal Care Simulation Learning Experiences (SLEs) provide you with a library of ready-to-use, evidence-based scenarios designed to help you maximize participant's learning through outcome-focused simulated clinical patient encounters.

The package includes 8 SLEs complete with a facilitator's guidebook for planning, setting up, and facilitating each learning experience:

- Acute Respiratory Distress Syndrome
- Bronchopulmonary Dysplasia with Pulmonary Hypertension
- Drug-Exposed Infant/ Neonatal Abstinence Syndrome
- Early-Onset Sepsis
- Late-Onset Sepsis
- Nuchal Cord
- Pneumonia
- Shoulder Dystocia

Care and monitoring using real devices

With TORY, learners can use real devices to monitor heart rate, respiration, and EtCO₂. Train device operation and interpretation to improve patient safety. TORY also features multiple IV access sites to engage the learners' cognitive, technical, and psychomotor skills.

Monitor using real devices

Bilateral IV access and infusion

Arterial/venous umbilical cath.

Navel insert post cord detachment

Urinary catheterization

Bowel sounds

Handoff and transport. Wireless, tetherless, and battery-powered

TORY is fully functional while on battery power for up to 4 hours. There are no distracting controller wires or tethered external compressors. Our proven wireless and tetherless technology lets you easily simulate transitional care scenarios to improve inter and intra-disciplinary teamwork and communication.

Wireless and tetherless operation

I/O access with drain port for infusion

IV access with drain port for infusion

UNI® Unified Simulator Control Software

Powered by Microsoft® Surface Pro

Powerfully intuitive.

Ready for use.

Wireless and tetherless operation, UNI's intuitive design offers the ease of use and capabilities required by even the most demanding simulation programs. UNI's interface design is shared across our complete line of computer-controlled patient simulators. Once familiarized, you can quickly apply your skills to operate other Gaumard products without retraining, saving your program valuable time and money.

- **Preconfigured and Ready** - UNI comes preloaded and preconfigured on the rugged 12" wireless tablet PC included with the package.
- **3D Patient Visualization Monitor** - This real-time 3D view of the patient ensures you never lose track of provider/patient interaction during the simulation.
- **Scenario Designer** - Create your own scenarios quickly and easily and share them with other UNI users.
- **eCPR™** - Monitor rate and compression depth, no-flow time, ventilation rate, and excessive ventilation; smart trainer features vocal cues and outputs a performance report.
- **Lab Report Designer** - Generate and share simulated diagnostic lab results to enhance case fidelity and participant involvement
- **Questionnaire Form Designer** - Manage progress by easily creating interactive checklists to track participant objectives and post-simulation feedback.
- **Time-stamped Event Recording and Reporting** - The automated event tracking and interaction recorder ensures important events are always captured so you can focus on the action.
- **Provider Actions Tracker** - The interactive "Actions" panel lets you carefully track additional team and individual provider actions to generate a comprehensive post-simulation log.
- **UNI Control View Replay** - The built-in recorder captures UNI's screen as data to allow your team to review the simulation from the operator's chair.
- **No Annual Software License Fee** - Gaumard is committed to providing the best value and to keep your program's operating costs down year after year.
- **Free Software Updates** - Always stay up to date and take advantage of all the newest features at no additional cost.
- **Free Webinar Training and Technical Support** - Sign up to our monthly webinar sessions and become a UNI expert.

Features

Appearance and anatomy

- Age: 40-week term newborn
- Weight 6 lbs. / 2.7kg
- Length 20.75 in / 52.7cm
- Smooth and supple full body skin
- Seamless trunk and limb joints
- Realistic joint articulation: neck, shoulder, elbow, hip, and knee
- Forearm pronation and supination
- Lifelike umbilicus
- Palpable landmarks including ribs and xiphoid process

Tetherless and wireless connectivity

- Tetherless and fully responsive even while being transported
- Internal rechargeable battery provides up to 4 hrs. of tetherless operation¹
- Pneumatic and fluid reservoirs are housed inside the body
- VICTORIA®/NOELLE® Fetus-Newborn wireless link capability

Airway

- Head tilt, chin lift, jaw thrust
- Realistic orotracheal and nasotracheal airway and visible vocal cords
- Bag-valve-mask ventilation
- Neck hyperextension and airway obstruction with event capture and logging
- Intubation depth detection and logging
- Programmable crying/grunting sounds
- ETT, LMA, fiberoptic intubation

Breathing

- Spontaneous breathing
- Variable respiratory rates and inspiratory/expiratory ratios
- Visible chest rise with bag valve mask ventilation
- Unilateral chest rise with right mainstem intubation
- Lung ventilations are measured and logged
- Programmable unilateral chest rise and fall
- Unilateral lung sounds synchronized with respiratory rate
- Real end-tidal EtCO dependent on cardiac output (Requires option: S2210.078)

Cardiac

- Comprehensive ECG rhythm library
- ECG monitoring using real devices
- eCPR™ Real-time CPR performance monitor and trainer
- Effective chest compressions generate palpable pulses and ECG activity
- Healthy and abnormal heart sounds
- Virtual pacing and defibrillation

Circulatory

- Visible central cyanosis with programmable intensity
- Fontanelle, brachial, and umbilical pulses
- Blood pressure-dependent pulses
- Blood pressure measurement using real modified BP cuff
- Audible Korotkoff sounds
- Pre-ductal and post-ductal O₂ saturation values simulated on patient monitor
- Arterial/venous umbilical catheterization

Vascular access

- Bilateral IV arms
- IV access on the lower left leg
- Umbilical vein and arteries support catheterization and infusion
- Intraosseous access and infusion at right tibia
- Bilateral anterolateral thigh intramuscular injection sites

Digestive

- Interchangeable female and male genitalia
- Urinary catheterization
- Selectable bowel sounds

Other

- Navel insert post cord detachment
- Seizures/Convulsions
- Programmable muscle tone: bilateral or unilateral arm movement, reduced and limp
- Temperature sensor placement detection

Newborn TORY® S2210

S2210.PK ● ● ●

TORY Tetherless Patient Simulator, UNI Tablet PC, Neonatal Care Simulation Learning Experiences scenario package, RF module, battery charger/power supply, receiving blanket, umbilical cords, tibia bone pack, replacement lower arms, BP cuff, IV filling kit, soft carrying case, user manual. One-Year Limited Warranty. Extended service plans available. Skin tones available at no extra charge. Patented; other patents pending.

Gaumard Vitals™ Bedside Virtual Monitor

30080154B

Gaumard Vitals bedside virtual patient monitor. Simulates 20+ dynamic numerical parameters and waveforms. Customizable interface.

Gaumard Vitals™ Portable Virtual Monitor

30081003A

Portable Gaumard Vitals virtual patient monitor. Simulates 20+ dynamic numerical parameters and waveforms. Customizable interface.

CO₂ Exhalation regulator

S2210.078

Real and measurable EtCO₂ with 10 programmable levels of CO₂ output.

Care in Motion™ Mobile Video Debriefing System

CIM.PK

Care In Motion Tablet PC, 3 Battery-powered HD wireless cameras, 3 adjustable camera grips, transport case, and one-year limited warranty (extended warranty plans available).
